

# MRI of the Elbow

1. The elbow is made up of how many separate articulations with a common capsule?
  - a. Two
  - b. Three
  - c. Four
  - d. Five
2. In MR of the elbow, which of the following provides a much-needed improvement in signal-to-noise ratio and improved image resolution?
  - a. Higher field strength
  - b. Dedicated coils
  - c. Small field of view
  - d. A & B
3. Which of the following is part of the elbow joint?
  - a. Humerus
  - b. Ulna
  - c. Radius
  - d. All the above
4. In elbow stress fractures the olecranon is involved in what percentage of cases?
  - a. 96%
  - b. 97%
  - c. 98%
  - d. 99%
5. What is the most important ligament that stabilizes the elbow?
  - a. Ulnar collateral ligament
  - b. Radial collateral ligament
  - c. Annular ligament
  - d. Lateral ulnar collateral ligament
6. Throwing athletes often develop a constellation of injuries known as the \_\_\_\_\_ overload syndrome.
  - a. Maximum
  - b. Annular
  - c. Valgus
  - d. Bundle
7. What is the most common pattern of recurrent elbow instability?
  - a. Ulnar collateral ligament tear
  - b. Posterolateral rotatory instability
  - c. Little league instability
  - d. T-sign instability
8. Tendon injuries are organized in which of the following classifications?
  - a. Location
  - b. Acuity
  - c. Degree of injury
  - d. All the above
